

Java Certification Workshop

Duration:	1 day
Type:	intermediate

Description

This workshop is designed to prepare developers for the Sun Certified Java Programmer exam. Prior to the event delegates are sent a sample test, which thoroughly tests their knowledge of the topics included in the exam. This test then becomes the basis of the workshop, as delegates are taken through each question in detail with a special focus on those areas where their knowledge was weak. The workshop is designed to pay particular attention to areas which Java developers typically do not use on a day to day basis, such as bit shifting and low level threading.

Prerequisites

Delegates should have several years experience in Java development
